

Site Layout

Civil Engineering

Planning the site before the first load.

Double handling and near misses both start with a bad layout.

Movement

One-way flow with a turning head

Segregated pedestrian routes and gates

Wheel wash before the public highway

Crane sited to cover the work face

Deliveries booked to stop queuing

Facilities

Welfare, offices and drying rooms

Laydown space near the point of use

Waste segregation with skip access

Secure store for plant and materials

Utilities, lighting and a fire point

Educational reference. Site arrangements must satisfy local regulation, the contract and the agreed method statements.
