

Useful Git Config

Computing

The settings worth putting in your global config on a new machine.

git config --global <key> <value>

Identity

user.name

user.email

init.defaultBranch main

Safety

pull.rebase true

push.default simple

fetch.prune true

rebase.autoStash true

Quality of life

core.editor

diff.algorithm histogram

merge.conflictStyle zdiff3

column.ui auto

Aliases

alias.s status -sb

alias.lg log --oneline --graph

alias.last log -1 HEAD

merge.conflictStyle zdiff3 shows the common ancestor in a conflict, which usually makes the resolution obvious.
