

The Four Seasons

1st Grade

What changes outside across a year, and why it repeats.

The seasons come round in the same order every year, always.

Season	Weather	What you see outside
Spring	mild, showery	buds, blossom, lambs, nests
Summer	warm, long days	full green leaves, flowers, bees
Autumn	cooler, windy	leaves turn and fall, conkers
Winter	cold, short days	bare branches, frost, no insects

Earth is tilted, so each half leans towards the Sun for part of the year.
That tilt is the season.
