

Habitats

2nd Grade

Six places animals live, and what each one provides.

A habitat gives an animal everything it needs: food, water, shelter and space.

Habitat	What it is like	Who lives there
Forest	trees, shade, damp	deer, owl, squirrel
Desert	hot, very dry	camel, lizard, cactus
Ocean	salt water, deep	whale, crab, coral
Grassland	open, grassy	zebra, lion, mouse
Arctic	freezing, icy	polar bear, seal
Pond	fresh water, shallow	frog, duck, dragonfly

Animals are built for their habitat — a polar bear's fur would kill it in the desert.
