

Landforms

2nd Grade

Ten shapes the land makes, defined in one line each.

The land is not flat. These are the shapes it takes.

Landform	What it is
Mountain	very high land with steep sides
Hill	raised land, lower and rounder
Valley	low ground between hills
Plain	wide flat land
Plateau	flat land raised high up
Island	land with water all around it
Peninsula	land with water on three sides
Canyon	deep narrow valley cut by a river

Water made most of these — rivers cut valleys and canyons over millions of years.
