

Weather Tools

2nd Grade

The five instruments, what each one measures, and its unit.

Weather is measured, not guessed. Each tool has one job.

Tool	Measures	Unit
Thermometer	temperature	°C or °F
Rain gauge	rainfall	mm or inches
Wind vane	wind direction	N, S, E, W
Anemometer	wind speed	km/h or mph
Barometer	air pressure	hPa

Falling pressure usually means rain is coming. That is how forecasts began.
