

Right, Acute, Obtuse

3rd Grade

Three sizes of angle, measured against the corner of a page.

Compare every angle to a square corner. That corner is 90 degrees.

Angle	Size	How to spot it
Acute	less than 90°	sharper than a book corner
Right	exactly 90°	fits a book corner exactly
Obtuse	between 90° and 180°	wider than a book corner
Straight	exactly 180°	a flat line

A right angle gets a little square drawn in it, never an arc. That is the convention.
