

The Solar System

4th Grade

Eight planets to relative size and order, with one fact each.

1 Mercury

Smallest. No moons. A year takes 88 days.

2 Venus

Hottest planet — a thick blanket of cloud.

3 Earth

The only one we know with liquid water and life.

4 Mars

Red from rusty iron dust. Two tiny moons.

5 Jupiter

Largest. The Great Red Spot is a centuries-old storm.

6 Saturn

Rings made of ice and rock, some as small as dust.

7 Uranus

Tipped on its side, so it rolls round the Sun.

8 Neptune

Windiest. Furthest from the Sun.

REMEMBER THE ORDER

My Very Easy Method Just Speeds Up Names Pluto is a dwarf planet
