

Excretory System

5th Grade

Filters waste out of the blood and removes it.

Filters waste out of the blood and removes it, keeping the body's water and salt in balance.

MAIN PARTS

kidneys, bladder

- The kidneys filter your entire blood supply about 40 times a day.
- You have two kidneys but can live with one.
- Sweat removes waste and cools you at the same time.
- The lungs excrete carbon dioxide.
- The bladder can hold roughly half a litre.

LOOK FOR IT

kidneys · bladder · ureters · skin · lungs

Cleans up after the digestive and circulatory systems.
