

Immune System

5th Grade

Finds and destroys germs.

Finds and destroys germs, and remembers them so the next attack is faster.

MAIN PARTS

white blood cells, lymph nodes

- Skin is the first barrier — unbroken skin keeps most germs out.
- White blood cells hunt down bacteria and viruses.
- A fever is deliberate: heat makes it harder for germs to survive.
- Memory cells remember a germ for years.
- Vaccines train the memory cells without you getting ill.

LOOK FOR IT

white blood cells · lymph nodes · spleen · skin

Travels through the circulatory and lymphatic systems to reach everywhere.
