

Butterfly Life Cycle

Kindergarten

Egg, caterpillar, chrysalis, butterfly — drawn as a loop.

1. EGG

A tiny egg is laid under a leaf.

2. CATERPILLAR

It hatches and eats — and eats.

3. CHRYSALIS

It hangs still and changes inside.

4. BUTTERFLY

It comes out with wings, and lays eggs.

A big change of body shape like this is called metamorphosis. Frogs do it too.
