

Day and Night

Kindergarten

Why it gets dark — and what changes when it does.

DAY

- The Sun is up
- Our side of Earth faces the Sun
- Bright enough to play outside
- Most animals are awake
- We eat breakfast and lunch

NIGHT

- The Sun is down
- Our side faces away from the Sun
- We see the Moon and stars
- Owls, bats and foxes come out
- We sleep

THE DIFFERENCE THAT MATTERS

The Sun does not go anywhere. The Earth turns, and we turn away from it.

One full turn takes 24 hours. That is exactly one day and one night.
